

SOFTWARE DEVELOPER

JUNIOR

Pyxima is setting up a new development team and is therefore looking for an enthusiastic software developer to be part of our team. You will be working on our flagship product Pyxicare.

Development takes place mainly in-house at our office in Geel.

As an all-rounder you love a job with variation and creativity where you can work independently. Your role in the expanding team may vary depending on the workload, roadmap, your personal growth and ambitions, but software development is what you love to do.

TASKS

- Develop on our central synchronization and communication platform.
- Develop and maintain our APIs.

Depending on your ambitions, skills and interests you can be involved on a diversity of tasks:

- Analyze and develop our web portal, backend and/or frontend development.
- Develop new features (front to back) and maintain the Pyxicare native Android application.
- Review Xamarin based Pyxicare code.

SKILLS

- Feel related with our products and see it as a challenge to dive into code.
- Work independent and finish a task by yourself, but working for the team is what really matters.
- A Master's/ Bachelor degree in Computer Sciences.
- Less than 2 years of development experience or none at all which you compensate with a positive work attitude!
- Have good knowledge of Java.
- Fluently in English and Dutch.
- Interests in mobile applications is a must, therefore you are interested in mobile environments like Android and iOS.
- You are willing to learn on the job!
